

# FILTEX

## Filter aids for body feed filtration

### APPLICATIONS

**Filtex** range products were designed to be used during body feed filtration as effective substitutes for diatomaceous earths used for cake formation. Contrary to diatomaceous earths, **Filtex** products are not considered dangerous according to current legislation and therefore can be used without potential hazards for the user.

Given the chosen raw materials and the type of processing, **Filtex** products form a homogeneous cake with consistent porosity across the entire breadth. This ensures an optimal, deep filtration.

For best filtration results, **Filtex** products are used along with high quality precoat: Rhocell, Fitofloc and Fitomix.

Types available:

- **Filtex 1**            **for coarse filtration**
- **Filtex 3**            **for brilliance filtration**
- **Filtex 7**            **for sterile filtration**

### DOSAGE AND USE

20-100 g/hL according to the potential clogging characteristics of the must or wine

Dissolve **Filtex** within the mass to be filtered and follow with normal processing

### PACKAGING

20 kg bags
